

## BOTTOM DRIVEN PILING AT BLACKPOOL

Client:  
**A. E. Yates Ltd**

## PROJECT DETAILS

### BOTTOM DRIVEN PILING AT REPAIR TO SEWER LINE

The installation of 305mm bottom driven thin walled pile, over an open manhole shaft. The project involved the installation of remedial piles to a manhole which was showing signs of significant settlement.

The piles were driven from a temporary working platform using one of Tritechs tripod winches holding a 1.2 ton hammer.

The technique of using the winch keeps the pile rig working weights to a minimum and using bottom driven piling techniques, vibrations are reduced.
