

TRIPOD BORED PILING IN LONDON

Client:
Neil Foundations

PROJECT DETAILS

TRIPOD BORED PILING FOR RENOVATION OF LISTED STRUCTURE

Installation of piles at ground floor level with restricted access inside. The Tripod was the ideal piling rig due to the light loading from the main legs of the piling frame. The client did not have to provide robust propping of the ground floor. 450mm diameter piles installed to depths of up to 25m
